

10.4" Touchscreen Liquid Crystal Display

Introduction

The E-Plex® 350LCD series is a family of liquid crystal-displays that have been designed to give the customer a choice of desired features without requiring a traditional operating system on a PC. An integrated touch screen interface allows for monitoring and controlling of different key subsystems, all from one location.

In addition to the system display and control features, the 350LCD series module can double as a video display for inputs from satellite TV, VCR, DVD, DVR, video game consoles, security cameras, and any other video source that supports RCA and S-Video connectivity. For example, you can watch your favorite DVD on the 350LCD, and with a quick touch of the screen, all the controls and monitoring of your system are available for you to access.
